For Immediate Release

Supplier Delays Continue to Impact Grenlec’s Street Light Installation and Repair Programme.

25 June 2021: Grenlec is advising customers about ongoing shipment delays that are negatively impacting the Company’s street light installation and repair programme.

The Company pre-ordered a year’s supply of street lights in January to be delivered in four shipments. The Company has exhausted its available stock of lights and parts and has yet to receive new stock because of supply chain challenges related to COVID-19.

Grenlec apologises for the inconvenience to customers for these delays as the Company continues to explore sustainable options for supply.

The Company advises customers to continue to report street light faults by contacting Grenlec’s 24-hour fault line at telephone number 237, so that once the new stock of lights is received it can immediately commence repairs and replacements.
